

Remote Robot Readiness Review

Scope, deliverables and turnaround

An independent, remote, one-week assessment of where service robots would realistically pay off in an operation — delivered without a site visit and without calls.

What you receive

One PDF report, delivered by email:

1. Executive summary — the recommendations, the estimated annual savings, and what has to be in place first.
2. Use-case map — each candidate task, how it is done today, what changes with a robot, and the time released per year.
3. Robot class shortlist — the classes that fit, with indicative UK rental and purchase costs. Manufacturer-neutral.
4. Site requirements checklist — lifts, doors, corridors, Wi-Fi, charging, routing: what has to be true before a pilot can run.
5. Compliance and insurance notes — certification, who insures the unit, risk assessment, data and signage, in plain language.
6. 90-day implementation plan — from preparation to a 30-day pilot to the rollout decision, with the performance threshold written into the plan.
7. Appendix — indicative commercial frame and the assumptions behind every number.

Typical report length is 8–12 pages. It is written to be shared internally, with a board, or with a landlord or insurer.

How it works

1. Questionnaire. We send a 25-question intake form, answered inline by email. It takes 20–25 minutes. Approximate numbers are fine.
2. Attachments. Floor plans or simple sketches, photographs of the busiest area, the service lift and the doors, and the lift make and model if known. Attachments improve the report; they are not a condition of it.
3. Follow-up questions. Two or three short questions by email if anything material is missing.
4. Report. Delivered as a PDF within the turnaround below.

There is no site visit and there are no calls. Everything is done by email.

Turnaround

Five working days from receipt of the completed questionnaire. If floor plans or photographs arrive after the questionnaire, the clock runs from the last material input, or we start and mark the gap in the report — your choice. We confirm the start date by email when the questionnaire arrives.

What we need from you

- The completed questionnaire.
- A floor plan, or a simple sketch with the intended route marked.
- Photographs: the busiest corridor or area, the service lift, the doors on the route.

- The lift make and model, if you have it (this decides whether multi-floor operation is possible).
- One named contact for clarification.

Scope boundaries

- Remote and desktop only. No site visit, no installation, no physical survey.
- Manufacturer-neutral. No supplier is favoured. Where more than one class fits, the report says why one is recommended.
- Indicative figures. Rental and purchase costs are indicative and subject to a supplier's own site survey and written quotation.
- Not included. Building or structural survey, electrical work, legal, insurance or accounting advice, and procurement or contract negotiation.
